### Windows Version Release Notes

**01 December 2006**

#### **Installation**

Download the software from the URL: [http://www.collabcad.com/ccad\\_downloads/CollabLand.zip](http://www.collabcad.com/ccad_downloads/CollabLand.zip) (Use the Login and password provided for this purpose.) Execute the setup.exe file in the above bundle; CollabLand (along with user guide) would be automatically installed in the chosen drive/directory.

#### **Database Configuration**

CollabLand 1.3 uses PostgreSQL 8.1 database. This should be installed in the system separately. The password of the 'postgres' super user of the database should be 'postgres' itself. Also ensure that the database authentication method of local host is set as 'trust' and that of the remote clients as 'md5' in the pg\_hba.conf file.

#### **Execution and Login**

To execute CollabLand, invoke Start->Programs->CollabLand-CollabLand (or execute the collabland.bat file in the installed directory). While executing for the first time, CollabLand would prompt for the installation of the database. Choose the state for which CollabLand need to be customized, and the path for PostgreSQL; the database would be automatically created.

Once database is configured, CollabLand would prompt for Login and Password. Login as *nic*, with password *nic*. Change the password for *nic* user, as soon as you login. Also create logins for other users with appropriate permissions. If PostgreSQL is not installed properly, CollabLand would be executed in Demo Version Mode without any saving/restore facilities.

The user manual can be accessed from Start->Programs->CollabLand->CollabLand Users Guide.
